

TEAM RPG DEV: A NEW ERA OF ENGAGEMENT

INTRODUCTION

For Milestone 2, we were tasked with conducting user-research interviews with a diverse pool of potential users. To prepare for each interview our team collectively formed questions to ask the interviewees recruited.

What we looked to leave from these interviews were pain points users may have experienced and common patterns and themes. With this thought in mind we formed user insights and personas based off of our findings.

DEMOGRAPHICS

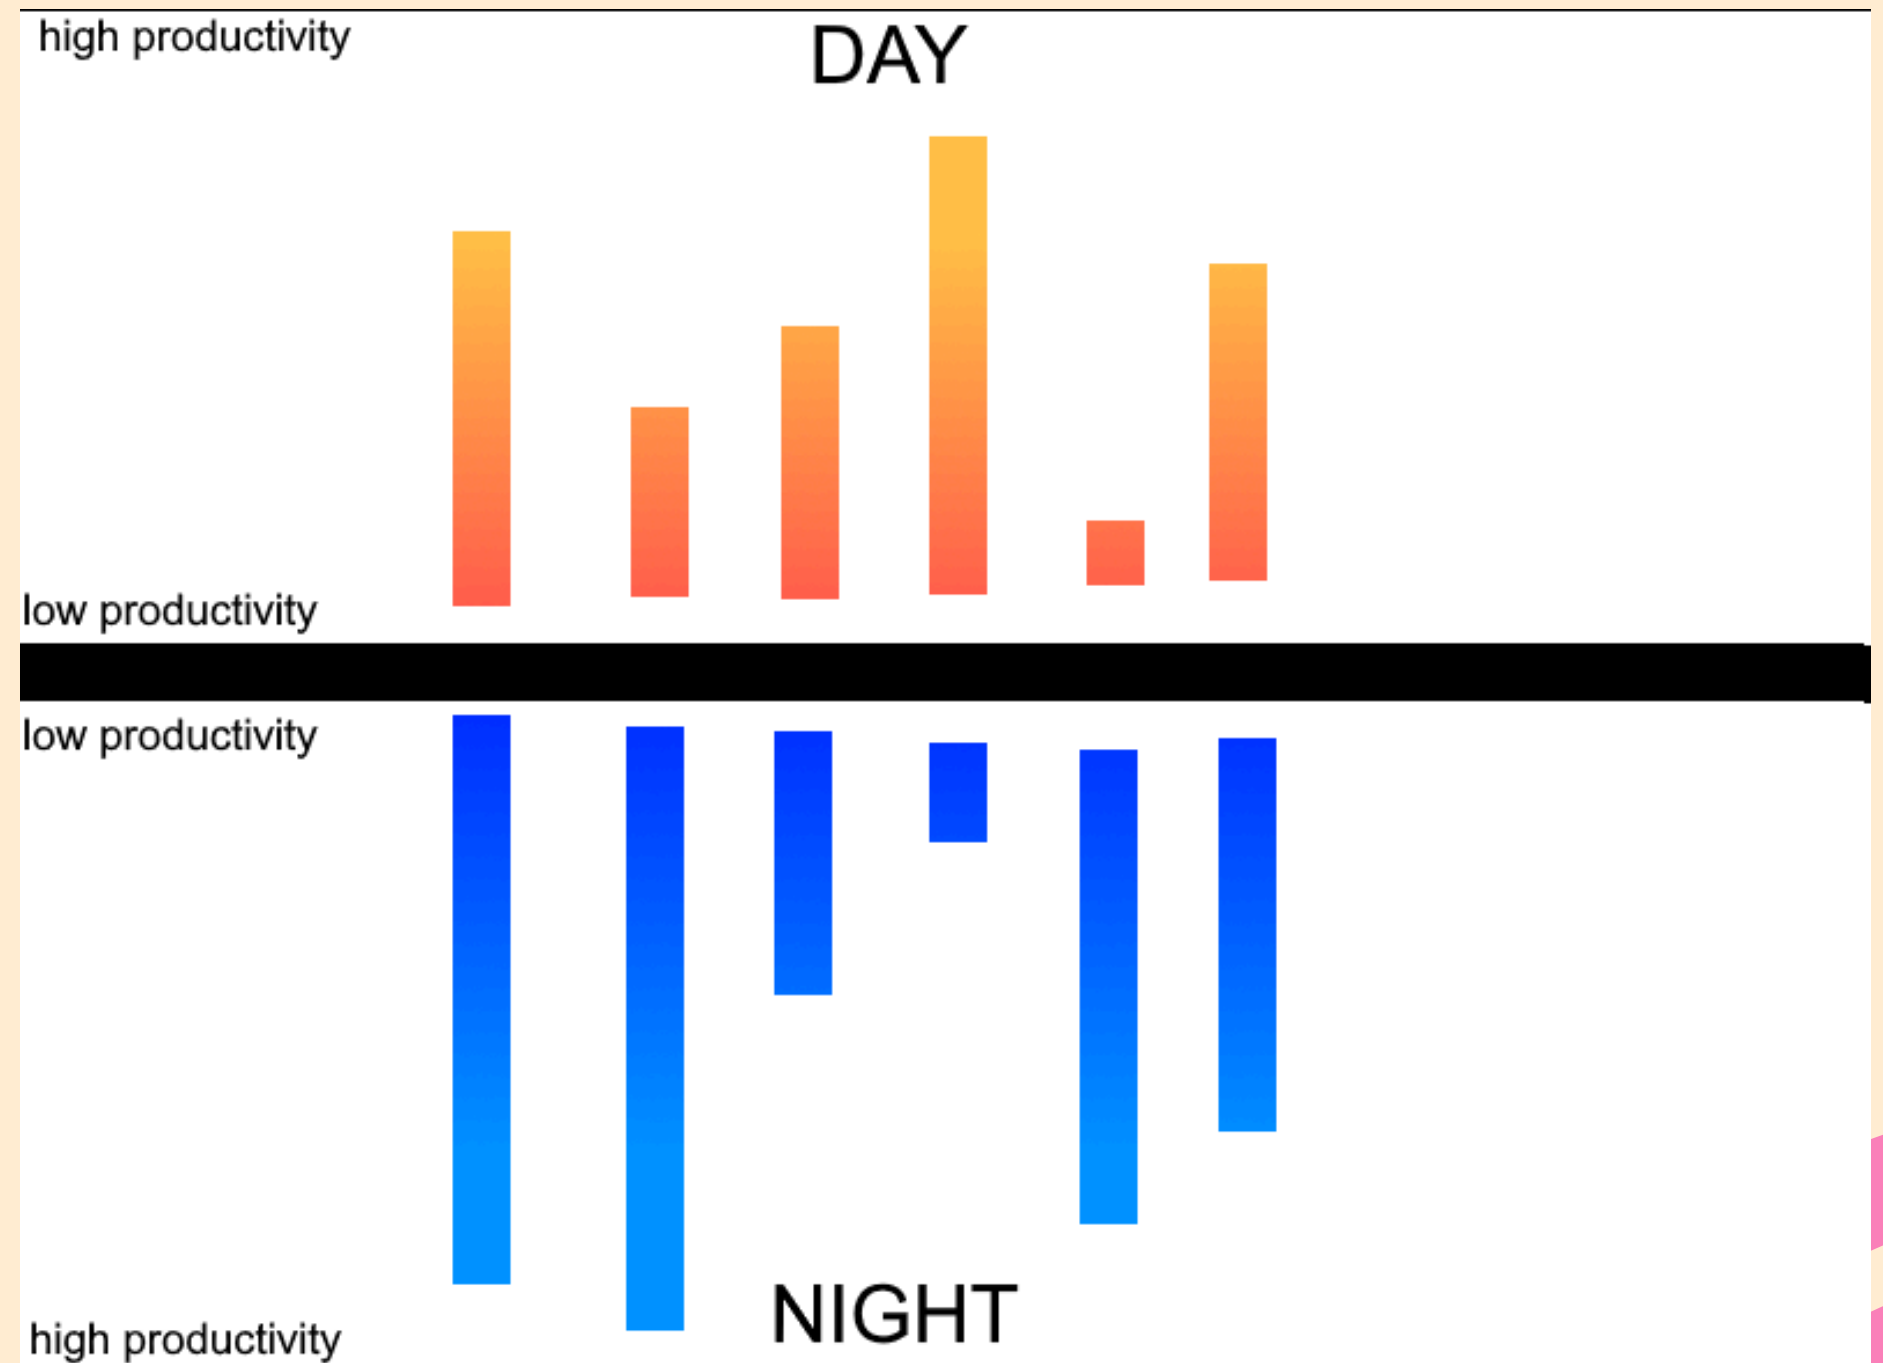

We interviewed 19 diverse individuals: Some job hunting, some already in the work force, and some were students with different backgrounds of study, ranging from Biology and Psychology to Computer Science and Electrical Engineering.

Categories we asked included: their work/school status, their application usages, their general engagements in applications, pain points, and their preferences in socialization.

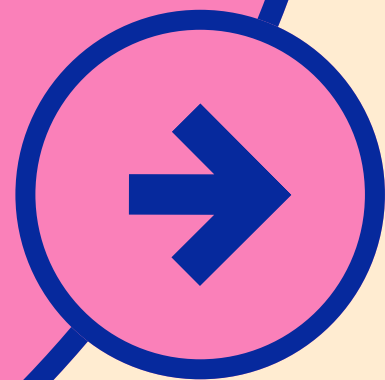

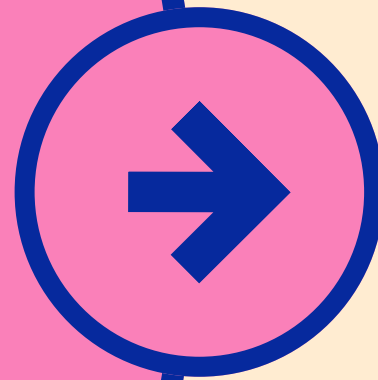

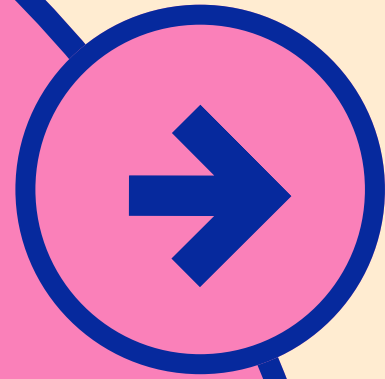

INSIGHT 1

- Users did not show consistency in productivity based on the time of the day; it was dependent on the tasks needed to be completed.

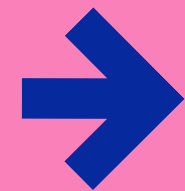

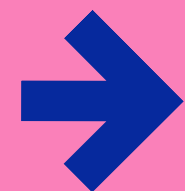

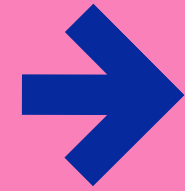

INSIGHT 2

- Interviewees did not necessarily need extra help with keeping track of current routines or tasks. Notable applications included: Google Calendar, Notion, and Reminders (for iOS)

INSIGHT 3

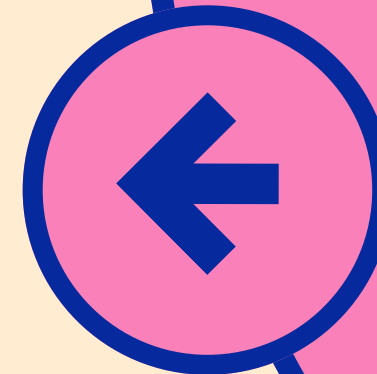

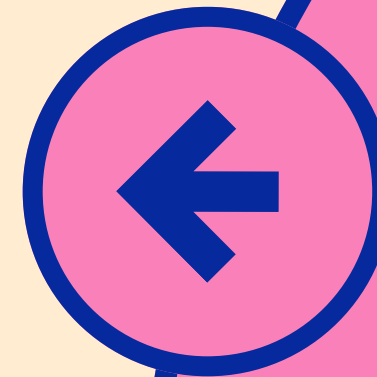

- Interviewees did highlight the importance of an intuitive interface. Their goal was to stay productive and not have elements of interference.
 - No clunky and intrusive layouts
 - Clean user interface
 - Customizability when tracking/planning tasks
 - Works “out of the box”
- A participant mentioned that Notion has a steep learning curve and requires extensive setup time

Several interviewees reported to have used apps in the past to track tasks and productivity. Common pain points shared by participants about these apps are:

- **Feeling overwhelmed planning for periods of time longer than day-to-day**
- **Lack of or had features clash with the app's intended purpose.**
- **Unnecessary complexity and questionable features**
- **Not having enough time for engagement**

INSIGHT 4

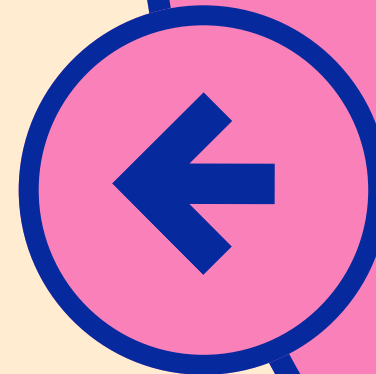

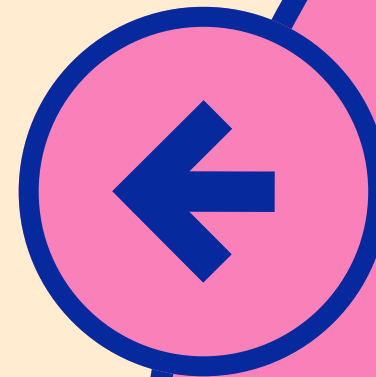

We realized many individuals seek self improvement through the use of apps.

- **Physically**
- **Mentally**
- **Socially**
- **Academically**

Our application will be built to be flexible in order to support the needs of the users.

- **Creating a path and tracking it is planned for our application.**

INSIGHT 5

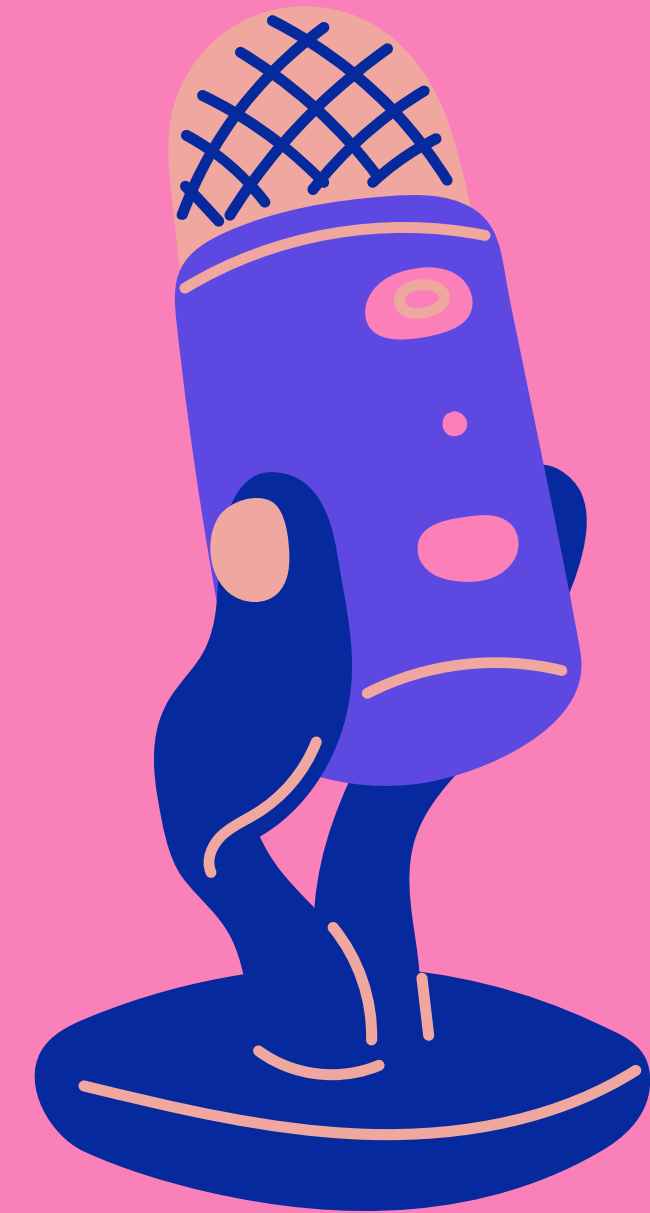

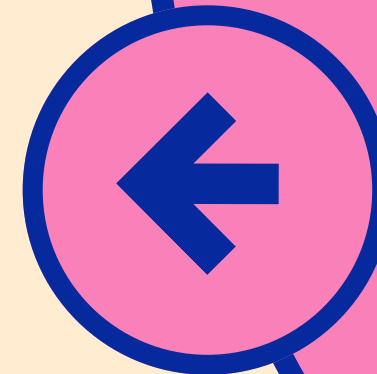

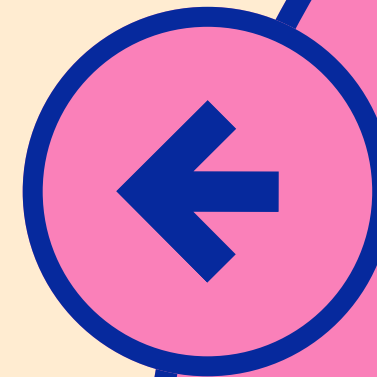

Interviewees indicated that they supported the idea of gamification. Benefits included:

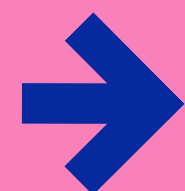

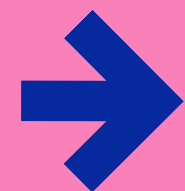

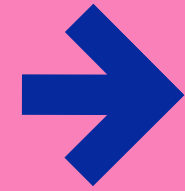

- **contribution towards motivation**
- **user engagement retention**

The way our team approaches integrating gamified elements into our app will be complex challenge: though people like to feel rewarded and accomplished for having completed tasks, especially gamers, the idea of gamification should not overwhelm our original purpose of helping others be more productive.

INSIGHT 6

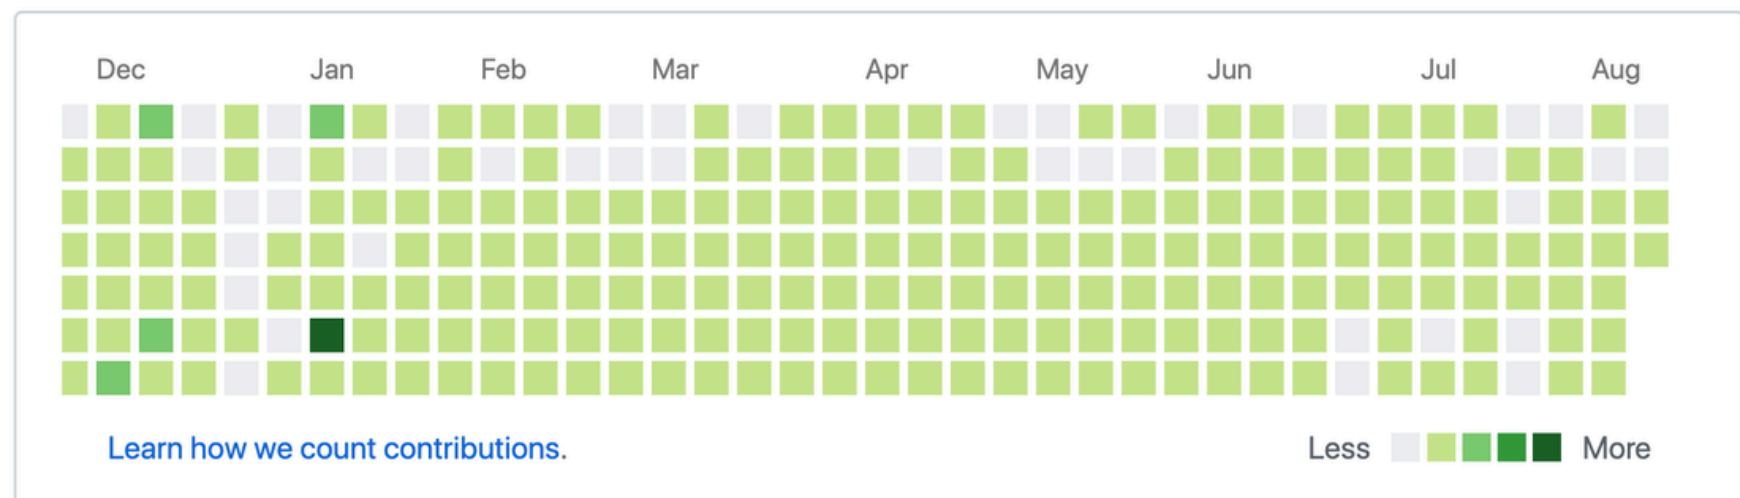

INSIGHT 7

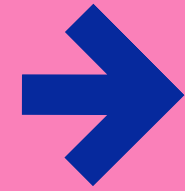

- Users want to visualize their productivity and progression
- Simple statistics can provide valuable information, one interviewee mentioned a “GitHub”-like heatmap, but for productivity
- Engaging visuals can make progress tracking more stimulating and attractive
 - Avatars
 - Cosmetics
 - Rewards
 - Badge system

455 contributions in the last year

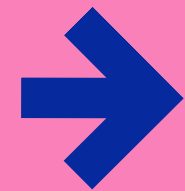

INSIGHT 8

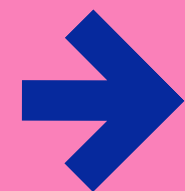

An insight gained was preference of desktop vs. mobile

- Gaming: Desktop
- Productivity: Mobile

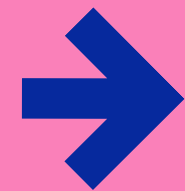

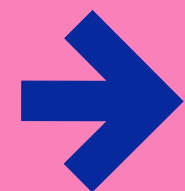

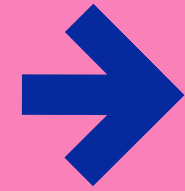

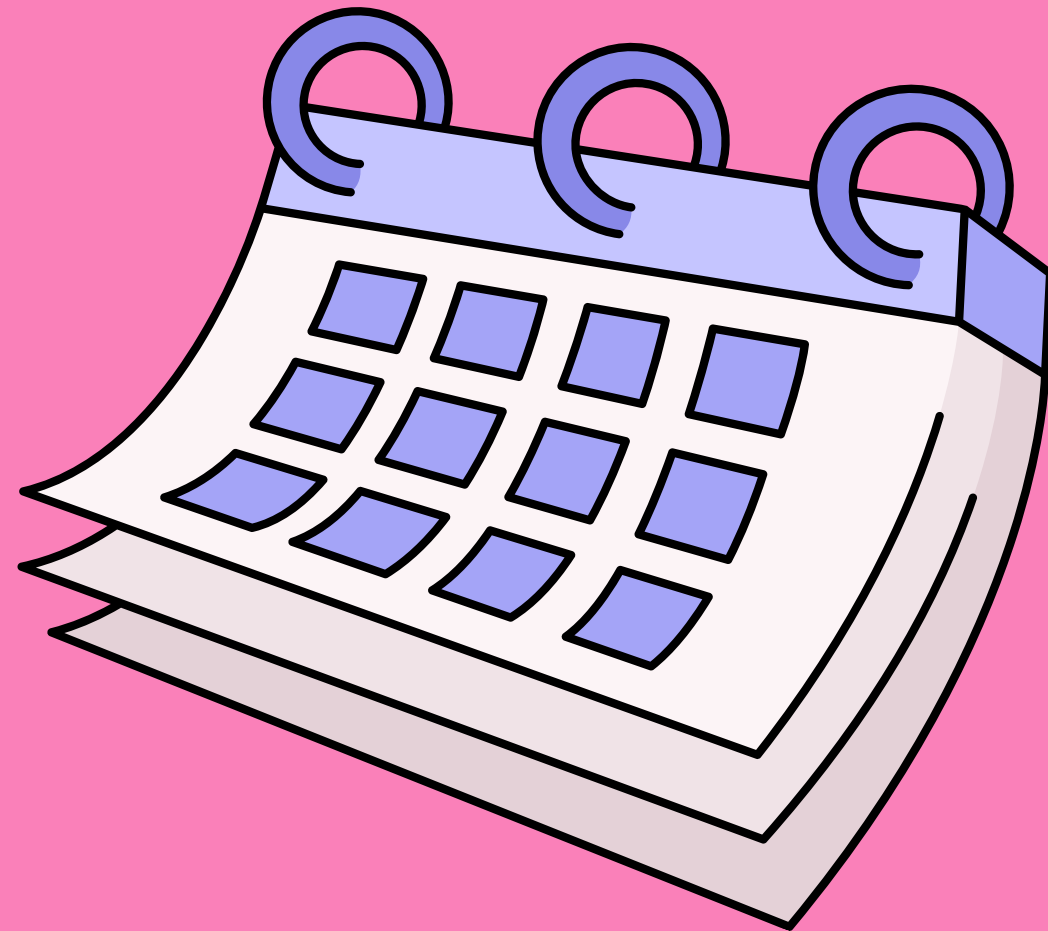

This reasoning can be summarized due to having their phone on their person more than their desktop or laptop

Android 

INSIGHT 9

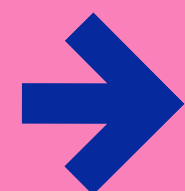

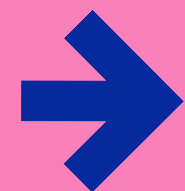

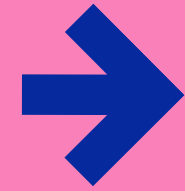

- Many meet deadlines, but are not always proud of it
 - Deadline is a motivator
 - creates unneeded stress
 - loss of self-discipline
- If users don't meet deadlines, they may lose engagement in productivity
- The solution is to visually guide users in meeting deadlines and goals and do not punish too harshly

DEADLINE

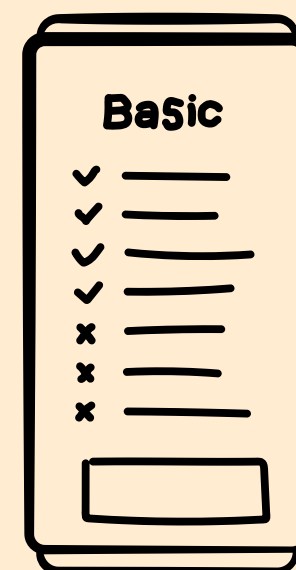

INSIGHT 10

Monetary costs are dependent on the application

- **More research to be done to determine the best pricing model**
- **Many were open to the idea of a free trial or demonstration before purchases**

Affordability is a priority to keep users engaged in our application, we want our application to be worth it and using money is for extra game-related aspects

Javier Patel

Age : 18-24

High School Education

College Student

Goals and Objectives

- Staying consistent
- Job hunting
- Starting a fulfilling and stable career

PAIN POINTS

- Overly Complicated UI
- Intrusive Notifications
- Having to Setup Up an App

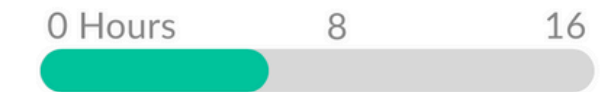

Technologies

- Mobile
- Desktop

MOTIVATION

- Stability
- Progression

Age : 25-35

Bachelor's Degree

Working Full Time

Goals and Objectives

- Become More Productive Outside of Work, Disconnect from Work Mindset
- Begin Working Out
- Maintain a Clean Living Space

PAIN POINTS

- Dislikes Samsung's Health App
- Wants Something Better than Physical List of Tasks
- Paid Apps Currently Not Worth Price

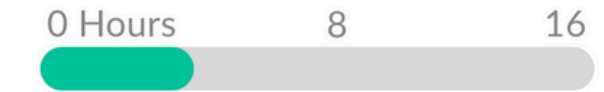

Technologies

- Mostly Mobile

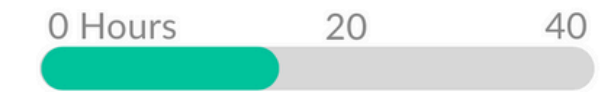

MOTIVATION

- Self Improvement
- Clear Goals
- Tracking Progress

Part Time Worker, Full Time Gamer

Goals and Objectives

- Spend Free Time Playing Video Games
- Balance Gaming with Life's Responsibilities
- Healthy Competition with Peers

PAIN POINTS

- Engaging Apps that aren't Productive
- Productivity Apps Aren't Fun
- No Reward for Completing Tasks

Technologies

- Mobile for Productivity
- Desktop for Gaming

MOTIVATION

- Enjoyable
- Gaming
- Well-Designed Rewards
- FoMO (Fear of Missing Out)

CONCLUSION

Our research highlights key factors for an engaging productivity app: users prefer visual progress tracking, mobile accessibility, and task management that reduces stress. Gamification elements like avatars, rewards, and progression systems enhance motivation and consistency. Affordability and trial access are also crucial for adoption.

With these insights, our team aims to create a productivity app that makes goal-setting enjoyable and rewarding, keeping users motivated and engaged.
